Abstract— Many of the measures which came following independence were based on the government's aim to use the banking sector as a significant reform agent. The planning strategy acknowledged the vital role of access to credit and financial services across society in the overall development of the country and democratic distribution of the benefits of economic progress. The National Finance Inclusion Mission or Sukanya Samriddhi Yojana is a small savings program launched by the Finance Department, the Treasury, the Indian government, with a broad-ranging view of providing banking facilities to people who do not hold or are not paid on their bank account in the legal banking sector, and the welfare of the poor. Under this program, consumers will have access to insurance and other overdraft services' basic bank accounts. The Sukanya Samriddhi Yojana investment scheme has been highly active since its launch on 22 January 2015. Post offices and banks of the public sector contribute to the success of the project approximately. Sukanya Samriddhi's girl's terrible idea is a fantastic start to giving her financial independence. Inflation may or may not be the sole expense to marriage and education, but it may also be part of our portfolio. It might be part of the process of investing.

I. INTRODUCTION

Today, it is vital for us to start with the young kid who is tomorrow's lady for having an empowered woman. Strong and empowered women are only when we see a woman with great self-esteem not just as recipients, but as inactive productivity positions concerned with human dignity. The ultimate aim is that the women's active, healthier, and self-confident children would have the same access to information and opportunities unfettered by social and cultural patterns and conventional roles. Only the education of a youngster can attain dimensions of empowerment.

At the heart of most policies established following Independence, the Government's intention to use the financial system as a key instrument for change was. The planning strategy identified the essential role of the loans and financial services available to the general people in the holistic development of the country with a democratic distribution of the advantages of economic progress. The authorities changed the policy framework from time to time in acknowledgment of that function to ensure the need for financial services to be satisfactorily addressed by diverse sectors of society.

Sukany samrudhi yojana overview:
The Scheme of Beti Bachao Beti Padhao is a program of the federal government. Beti Bachao Beti Padhao is a powerful effort to save the girls and train the girls throughout India. The Government of India is implementing a plan to promote awareness and increase the effectiveness of social services for girls in India. Indian Prime Minister Narendra Modi introduced a Sukanya Samriddhi Yojana under the Beti Bachao, Beti Padhao plan (launched 21 January 2015). This plan was created for Sukanya Samriddhi Yojana and succeed in paying the critical costs of the girl child, such as health, further education, and marriage.

This plan is a nice start to the young child's life, given that the Government of India is making significant efforts. It is the finest plan ever to relieve parental stress and to save the lives of girls who are born now and in the future by making this little annual commitment. The original investment of Rs. 100 crore began this endeavor. In addition, the Ministry of Interior has reportedly spent about Rs 150 crore on this initiative to ensure the protection of women in big Indian cities. The strategy to minimize the degree and effect of some social concerns concerning girls has also been designed and launched.

Sukanya Samriddhi Yojana is a government-supported special savings plan, which provides a girl with a primary account holder and a parent/ legal guardian with a joint account holder. This account may be created when the girls are 10 years old and contributions must be made 15 years after the account has been opened. Some of the major
characteristics and benefits of investment in a Samriddhi Yojana account are as follows:

- Initial deposit choice is as short as Rs 1000 up to Rs 1.5 lakh each year.
- 8.5 percent as of Q4, 2018-19, know a high fixed return rate.
- Tax advantage under the IT Law of 1961 following Section 80C.
- Investments that are completely tax-free as the principal invested are exempt from the maturity and interest earned.
- Investment for 15 years after opening the bank's account is made as a long-term investment
- For a female child's further education, a partial retirement option is offered
- Can be used at any PSU, India Post office, or private sector banks in India.

II. SIGNIFICANCE OF THE STUDY

The child sex ratio has declined in all countries in the country following the 2011 census data. The desired conduct of gender equality and the abolition of its preference among the Indian populace must be promoted as a matter of urgency. Many strategies to safeguard a female kid have been implemented. But neither program focuses on its financial capacity. The government of India established the Sukanya samriddhi yojana in 2015 to educate and empower women. The negative thinking of women places a burden on their parents in raising girls in this account.

III. STATEMENT OF PROBLEM

In today's world, saving is vital for everybody. It depends on the individual's lifestyle. In the post office and banks, the government launched several saving programs for girls' futures. One of the major systems is the sukanya samriddhi yojana. The main difficulty was that ignorant individuals are unaware of the government's program. The interest rate and loan unavailability against the program is not established. One of the difficulties is the maximum number of accounts opening. Investors can only get half the sum before maturity, and after the expiration time, the remainder is issued. A low priority is given to the saving plan of the awareness program. The current study is conducted to discover answers to these difficulties.

IV. SCOPE OF THE STUDY

The present study was done to identify the sensitivity and contentment of account holders towards the Sukanya samriddhi yojana system, with specific reference to the district of Aurangabad. The data were gathered through an interview schedule and questionnaire. The study includes an examination of account holders' views on Sukanya's samriddhi yojana plan in the post office and banks' knowledge and satisfaction. The study is intended to take place at the national/national level. The research includes account owners in the Aurangabad district for time and resources.

V. OBJECTIVE

The broad objective is to study the Awareness of Aurangabad towards the Sukanya Samithi Account. The specific objectives of the study are:

1. To determine the genesis and expansion of the Sukanya Samriddhi account in Maharashtra
2. To investigate the Samriddhi Scheme awareness sources.
3. To examine the influencing variables of Sukanya Samriddhi preference for customers.

VI. HYPOTHESIS

- H1 = There is a significant difference between gender and the positive attitude towards girl childbirth.
- H0 = There is no significant difference between gender and the positive attitude towards girl childbirth.

VII. METHODOLOGY

The research of sukanya samadhi accounts examines the variables responsible for opening sukanya samadhi accounts and respondents' perceptions and satisfaction. Related information was obtained from the sample respondents with schemes in district Aurangabad using a well-structured interview schedule.

- Research Design: Descriptive is the research design. Descriptive surveys and data that investigate market characteristics. Descriptive research is mostly concerned with characterizing the current condition. To assess the accounts holder's knowledge and contentment with the Sukanya samriddhi yojana plan, the researcher has to use data and information currently accessible and evaluate these facts.

- Sampling: The population of Sukanya samadhi yojana in the Aurangabad districts is 55358. Because of lack of time, the entire population can't be studied. such that using a single random sample procedure, the researcher picks 1 percent each.

(1% form bank + 1 % form post = sample for study)

At a 5% level of significance the calculated value is \( \chi^2 \) more ( \( \chi^2 < \text{calculated value} \) ) Therefore accept the alternative hypothesis that there is no significant difference between gender and the positive attitude towards girl child-birth.

IX. CONCLUSION AND FUTURE SCOPE

The Aurangabad District population data have shown that the female birth rate is steadily decreasing. Many research has been carried out to determine the causes of such a falling birth rate. The cost of bringing up girls and the costs during marriage and after marriage was an important reason not to favor girls. Many plans and programs had been declared to modify the mentality of the central people and the state governments. Sukanya sommridhi Account was one of the systems recently introduced by the national government for savings for girls' education and marriage costs. After analyzing several studies conducted in recent years, the researcher has found that the perspective of employees concerning SSA is being investigated. The researchers thus have carried out a study on the degree of perception and satisfaction of SSA, which has been descriptive and qualitative in the District of Aurangabad. 550 sample respondents received a well-structured questionnaire with questions on a closed-end or fire point scale. Employees received SSA data via employees, social media, and non-governmental organizations. Before opening the SSA account and investments, employees contact their families. They chose banks as openers and demonstrated the least advantages. One child's parents exhibited greater interest in opening an account than two children's parents. In the second week of the month, many parents choose to deposit money and visit the bank less than 5 times a month. Parents have saved 25% of their SSA income. The bank deposits score number one routes, among various avenues for investing.
